Lumios Analytics

Internal Executive E-Commerce Performance & Financial Dashboard

Google Ads API Compliance Documentation

> **Application Purpose:** Read-Only Internal Reporting Tool
> **Developer Company / Owner:** Lumios le Jeu (Internal Use Only)
> **Target End Users:** Internal Business Management Team (Private Access)

1. Executive Summary & Tool Overview

Lumios Analytics is a proprietary, internal executive dashboard built specifically for *Lumios le Jeu*. The tool consolidates multi-channel e-commerce performance metrics (Shopify sales, Amazon SP-API orders, shipping costs, payment gateway fees, and advertising expenditures) into a single unified financial P&L view.

The primary goal of integrating the Google Ads API is to automatically retrieve daily advertising spend metrics to calculate accurate **ROAS (Return on Ad Spend)**, **CPA (Cost Per Acquisition)**, and **Net Profit Margins** in real time.

2. Google Ads API Scope & Usage Details

The application requires **Read-Only Access** to basic performance reporting data via the Google Ads API REST endpoints:

- **Query Types:** Google Ads Query Language (GAQL) queries requesting daily cost metrics.
- **Fields Requested:** `segments.date`, `metrics.cost_micros` from the `customer` resource.
- **Access Frequency:** Automated once-daily sync job to fetch previous day spend.
- **No Write Operations:** The tool does NOT modify, create, manage, or delete any Google Ads campaigns, ads, keywords, or budgets.

3. Key Dashboard Features & Workflow

Feature Component	Description & Metric Data Source
Financial P&L Table	Aggregates Gross Revenue (Shopify + Amazon) minus Discounts, Returns, Shipping Costs, Payment Fees, and Google/Meta Ad Spends.

Feature Component	Description & Metric Data Source
ROAS & CPA Analytics	Calculates overall Return On Ad Spend (`Total Revenue / Total Ad Spend`) and Cost Per Acquisition (`Total Ad Spend / Order Count`).
Net Margin Calculator	Deducts 20% VAT/TVA, COGS (Product Costs), shipping rates, and ad spend to provide net HT/TTC net profit margins.

4. Data Storage, Security & Compliance

- **Data Isolation & Privacy:** All data fetched from the Google Ads API is strictly used for internal reporting of *Lumios le Jeu*. Data is never shared with third parties, sold, or exposed publicly.
- **Secure OAuth 2.0 Flow:** Authentication uses Google OAuth 2.0 with offline access (Refresh Token) restricted exclusively to authorized internal company accounts.
- **Local Secure Storage:** Metrics are cached in a private, encrypted local database strictly accessible within the company server environment.

5. Contact & Authorization

This document serves as formal application documentation for **Basic Access** to the Google Ads API for internal enterprise dashboard monitoring.
